

PREVENTIVE HEALTH EVALUATIONS

DIAGNOSTIČNI CENTER BLED
DIAGNOSTIC CENTRE

For a healthy and enjoyable life!

Health is one of basic human necessities. It allows individuals to be active and independent, which is crucial to their prosperity and quality of life. Our mission is to improve the quality of life. To offer professional, friendly, and discrete treatment of patients and to prevent healthy people developing illnesses. To help people enjoy life, instead of focusing on problems and diseases. With preventive health evaluations in the diagnostic centre Diagnostični center Bled, the road to health is much quicker and friendlier.

In Bled, in the grace of the natural environment, we perform the most demanding diagnostic tests.

Purpose of preventive health evaluations

Why do we recommend them?

Preventing serious diseases

Preventive health evaluations are sets of recommended examinations carried out by medical specialists. Their goal is to detect any initial illness that we can not detect ourselves, because it does not cause any problems in the early stage. Some diseases can develop ten years before first visible disease signs appear. When the symptoms occur, it is too late for prevention, and treatment is less effective. Only with preventive health evaluation we can prevent disease development or treat it soon enough.

In implementing preventive health evaluations, doctors are mainly focus on the risk factors that can lead to cardiovascular diseases and some of the most common types of cancer. The purpose of preventive evaluation is to detect diseases that do not show obvious symptoms and can only be discovered by diagnostic tests.

For whom are the preventive health evaluations intended?

For all that care for their health. For managers and executives, doctors recommend the first preventive evaluation at forty, in some cases even earlier.

Because of managers' and executives' stressful lifestyles, risk factors are higher. Therefore, we recommend the first preventive evaluation at forty. Preventive health evaluation is especially recommended when the hereditary burden is involved (when one of close family members has had the illness). In such cases, preventive health evaluation should be performed before 40 years of age.

It is advisable to have a preventive evaluation every five years, as our health conditions can change through the years. Diagnosis made several years ago is not a guarantee that we are still healthy. If a medical specialist makes such an assumption on the basis of findings, some analyses may be omitted in repeated evaluations.

Why trust your concern of health to professionals of the Diagnostični center Bled?

An in-depth and comprehensive examination of each individual is an essential priority of our preventive health programme. We offer several in-depth examinations in one location and thus a more comprehensive treatment of each individual.

1. PROFESSIONAL COMPETENCE

Our doctors are top experts in their fields. With continued training at home and abroad, and the most advanced medical equipment, they constantly follow developments in healthcare and diagnostics. Knowledge and experience are passed (through the exchange of views on cases that are solved with difficulty and new findings) systematically on a daily basis. A wide range of our own specialists ensures a high professionalism and a variety of services offered.

Our doctors are top experts who regularly attend training at home and abroad.

2. A COMPREHENSIVE TREATMENT OF AN EXAMINEE

After a detailed interview with the specialist, the examinee receives several different examinations. In this way, we can establish the clearest diagnosis with great certainty, or rule out the suspicion of a serious illness. Integral treatment, in addition to basic blood tests, X-ray and ultrasound examinations, includes endoscopic gastrointestinal examination, thorough examination of cardiovascular, urinary and reproductive system, skeleton and skin. Other examinations are carried out when the doctor establishes, during the initial interview, that they are needed.

3. COMPREHENSIVE EVALUATIONS ALSO INCLUDE GASTROSCOPY AND COLONOSCOPY

We were the first in Slovenia to perform two endoscopic examinations – gastroscopy and colonoscopy – as part of preventive health evaluations. Even today, we are one of the few that include them in a Comprehensive Health Evaluation. They can help us discover hidden changes in the digestive organs that would otherwise not be detected. Using gastroscopy, we determine also the status of the *Helicobacter pylori* bacterium, which causes stomach and duodenal ulcers and can also be carcinogenic. Colonoscopy helps us search pre-carcinogenic changes, since cancer of the colon is one of the most dangerous forms of cancer with a fatal outcome.

4. KINDNESS AND CARE FOR EXAMINEES

Diagnostični center Bled is its people, its employees. The relationship with our patients is based on a personal approach, individual treatment, friendliness, and helpfulness. We understand how difficult it is for the examinees during the examinations, so we are constantly providing support and words of encouragement. The atmosphere in our centre is very pleasant, positive, and unlike a typical hospital. We all care for our patients – from administrative assistants and nurses to doctors.

5. ALL EXAMINATIONS IN ONE PLACE

We perform all examinations in one place, thus examinees are not sent to other health institutions for additional examinations. State-of-the-art medical equipment allows us to get clear results as quickly as possible.

6. TRADITION

Preventive health evaluations in Diagnostični center Bled are being performed since 1993. To date, we have done more than 7,000 such evaluations.

7. GRACE OF NATURAL ENVIRONMENT IN BLEĐ AND A FRIENDLY ENVIRONMENT OF THE CITY CENTRE IN LJUBLJANA

Diagnostični center Bled is situated in an idyllic surrounding **in Bled**, just next to the health resort park and promenade around the lake. In Bled, the examinee is accommodated in a private air-conditioned room with bathroom, balcony, telephone, TV and internet access. Upon prior arrangement, you can also have an escort. Our restaurant Labod offers delicious food.

Our unit **in Ljubljana** is located in the heart of the Slovenian capital – in the Vila Urbana, which is easily accessible also to the elderly by public transport. A parking garage under the building provides comfortable parking. Also in Ljubljana, we offer the most modern standards for the implementation of medical procedures. In this way, we ensure well-being of both patients and staff.

Since 1993, we conducted more than 7,000 preventive evaluations.

Types of preventive health evaluations

Diagnostični center Bled offers three sets of preventive health evaluations, which differ in terms of scope and duration.

COMPREHENSIVE PREVENTIVE HEALTH EVALUATION

Includes the most evaluations and is the most comprehensive and thorough. It is therefore most frequently recommended by our doctors, especially to those examinees who come for the first examination or those that have not had an examination for several years.

ESSENTIAL AND ESSENTIAL PLUS PREVENTIVE HEALTH EVALUATIONS

Include recommended check-ups and examinations, designed especially for younger examinees.

Comprehensive Health Evaluation, which takes place in Bled, includes the largest number of examinations in order to fully assess your health status.

Duration and locations

The Comprehensive Health Evaluation takes place **in Bled**, while the partial, Essential and Essential Plus programmes take place **in Ljubljana**, and occasionally also in Bled.

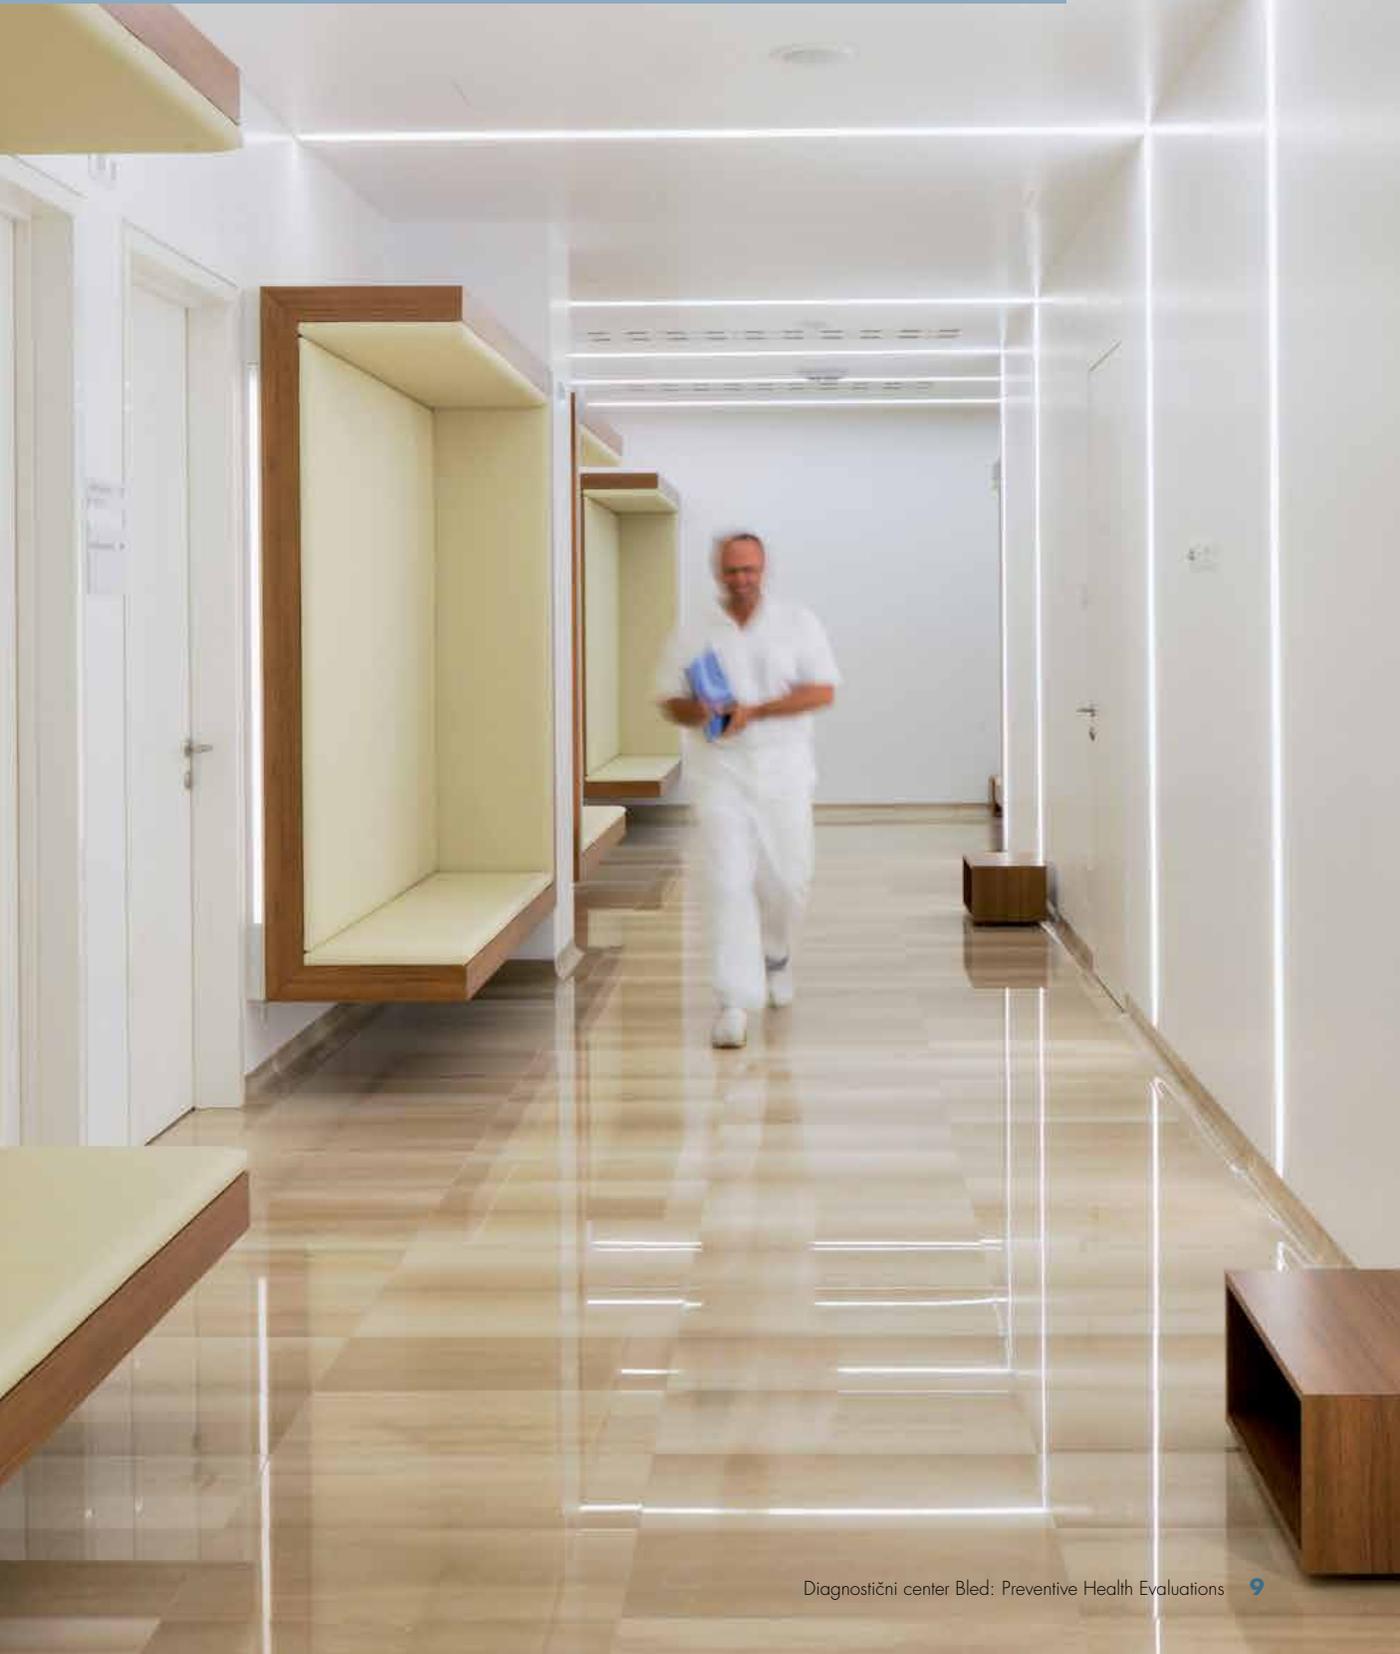

The Comprehensive Health Evaluation starts on **Monday morning** and ends early in the afternoon on Tuesday. Occasionally, we also offer weekend appointments that start on a Friday morning and finish by noon on a Saturday. The programme is implemented according to a schedule, which we inform you about upon arrival at our centre. The accommodation is arranged with us. The examinee is accommodated in a hotel-type rooms, which includes air conditioning, a private bathroom, balcony, telephone, television and internet access. The examinee occupies the room by himself/herself or with an accompanying person. Food is provided at our restaurant Labod.

Essential and Essential Plus healthcare evaluations are carried out on **Thursdays afternoon** at our branch **in Ljubljana**. The programme finishes in the evening and is implemented according to schedule, which we inform you about upon arrival at our centre. You wait in the waiting room during examinations. It includes a complimentary lunch break.

Healthcare programmes vary slightly according to the examinee's gender. They can also be adjusted according to your wishes.

The Essential Health Evaluation

includes basic health check-ups. It is carried out in one day in our premises in Ljubljana.

All medical examinations and tests are carried out by specialists. They devote enough time to examinees to talk about their health condition.

Presentation of examinations of preventive health evaluations

1. COMPREHENSIVE INTERNAL MEDICINE TREATMENT

Introductory internist examination with anamnesis and status, and a concluding interview with the interpretation of results and a written opinion

Upon arrival you are visited by an internal medicine specialist. You talk about past and any current medical problems, risk factors, family history, etc. Together you review the examination programme in detail and, if necessary (depending on the findings of the doctor), change or supplement it. After the completion of the treatment, you get all the results of individual tests, which you review together with the doctor and agree on further steps. Subsequently, you shall receive a written opinion on your medical condition to your home.

2. LABORATORY ANALYSES

Blood and urine test

- **Haematology:** total blood count, haemostasis (prothrombin time (INR), bleeding time – if necessary)
- **Sedimentation**
- **Urine tests, uric acid**
- **Biochemical analysis:** liver enzymes (AST, ALT, GGT, AF, bilirubins), electrolytes in blood (potassium, sodium, chlorine, calcium, phosphorus), kidney status indicators (urea, creatine, uric acid), pancreas tests (amylase, lipase), blood sugar, blood lipids (triglycerides, cholesterol), other parameters (CK, LDH, iron, proteins, albumins)
- **Other tests:** thyroid hormone (TSH), in men also specific antigen for prostate cancer (PSA)

The above analyses help us define a total blood count, liver function, kidney function, function of pancreas and thyroid as well as evaluate electrolyte balance, concentration of iron, glucose and cholesterol in blood.

3. ULTRASOUND AND X-RAY

A detailed examination of organs on the basis of ultrasound and X-ray images

- **Ultrasound of abdominal organs:** inspection of liver, gallbladder, pancreas, spleen, kidneys and major abdominal blood vessels, urinary tract, prostate and genitals
- **Breast ultrasound - for women aged 50 or below:** non-invasive and painless breast check-up and armpit lymph nodes examination
- **Ultrasound of leg veins and arteries**
- **Ultrasound of soft cervical tissue:** lymph nodes, salivary glands, thyroid
- **X-ray image of lungs and hearth in two projections**

4. GASTROENTEROLOGY AND DIAGNOSTICS

An in-depth endoscopic examinations of digestive organs

- **Gastroscopy:** endoscopic examination of oesophagus, stomach and duodenum
We are all aware that the stomach is an organ that is most often affected by mental overload and stress – frequent companions of managers and executives. Irregular nutrition also contributes to more frequent inflammations and wounds on mucous membrane of the stomach and duodenum, and increasingly also on the oesophagus.

Based on a thorough examination of the internal digestive organs we determine the appropriate form of treatment or recommend appropriate dietary measures. We discover *Helicobacter pylori* bacterium, which represents a major risk factor for the development of ulcer diseases and gastric cancer, by i.e. RUT test – rapid urease test or histological examination of the fragments taken from the stomach lining.

- **Colonoscopy:** endoscopic examination of large intestine and part of small intestine
The incidence of colorectal cancer is rapidly increasing in recent years. In Slovenia, over 1.600 patients are diagnosed with this type of cancer per year, which is the second most common cancer in men and third in women.

The most frequent findings in colonoscopy are polyps. They are formations that can develop into colon cancer over the years. Polyps are often found during a preventive health check, while they are not causing problems. During the examination, we remove them and therefore substantially lower the risk of cancer. On the basis of a histological image of removed polyps we advise regular checks every few years – depending on the alternation of polyp itself.

At the request of the examinee, we can perform endoscopic examinations under **analgo-sedation**. In analgo-sedation you receive a medicine with analgesic and sedative action. You are conscious during the examination.

5. GYNAECOLOGICAL EXAMINATION AND DIAGNOSTICS – women

Genital examination

- **PAP-test**
- **Cytology**
- **Gynaecological ultrasound**

Gynaecology is one of the few fields of medicine where by a quite simple examination, precancerous and cancer cervical changes can be detected. It also reveals vaginal changes, especially different inflammations, findings of tumours on uterus and ovaries and various anatomic changes.

6. UROLOGICAL EXAMINATION AND DIAGNOSTICS – men

Urinary system examination

- **Specialist examination at urologist**
- **Uroflow:** measures the flow of urine stream
- **PSA-analysis:** measures the level of prostate-specific antigen, which is determined by blood sampling
- **Rectal examination of prostate (upon indication)**

Men after forties often complain about prostate problems, regardless of whether it is a benign enlargements or cancer. With the examination, laboratory tests and functional tests of urine flow we determine when is the right time for treatment.

7. CARDIOLOGY EXAMINATION AND DIAGNOSTICS

Cardiovascular examination

- **Specialist examination at cardiologist**
- **ECG monitoring and examination:** basic test in cardiology that assesses the heart rhythm and function of the heart muscle.
- **Spirometry:** measurement of lung volume and function, which enables the separation of symptoms of lung and heart disease.
- **Cycloergometry on the treadmill:** assessment of activity of the cardiovascular system during physical activity.
- **Ultrasound examination of the heart:** identifying changes in the valves, thickness of the heart muscle, size of heart chambers, etc.
- **Carotid ultrasound:** assessment of early signs of atherosclerosis (hardening) of blood vessels.

8. DENSITOMETRY

Examination of bone density

The examination enables early detection of reduced bone density, which often indicates osteoporosis. The most significant clinical risk factors for fractures are age, early menopause, low body weight, smoking, hip fracture in mother or father, already sustained fracture after 45 years of age and taking corticosteroid drugs.

9. ORTHOPAEDIC EXAMINATION

Treatment of musculoskeletal diseases and injuries (joints, bones and ligaments)

An orthopaedic examination helps us discover degenerative diseases of the spine and joints, which are the most common cause of work absences. It helps us in advising on physical therapy and drug therapy.

10. OTORHINOLARYNGOLOGICAL EXAMINATION

Examination of ears, nose and throat

11. SPECIALIST DERMATOLOGICAL EXAMINATION

Specialist dermatological examination with the examination of moles

Regular examinations by a dermatologist are very important for the prevention, treatment and early detection of skin diseases.

12. NUTRITION CONSULTATION

A clinical dietitian will analyse your body composition using an InBody analyser, analyse your current eating habits, advice you on a healthy, protective diet and give you written instructions with a nutrition and exercise plan.

13. ADDITIONAL EXAMINATIONS

Other most frequent examinations, according to doctor's recommendation

During the examinations the doctor can determine the need for any additional examinations that are not included in our programme. The most common additional examinations are biopsy and polypectomy and histology of removed polyps (analysis of tissue in our own pathohistological laboratory), X-ray imaging of the skeleton, removal of changes on the skin and cystoscopy.

Other common examination you select yourself in advance:

- **Analgosedation at gastroscopy and/or colonoscopy**
- **Specialist examination at allergist with skin allergy tests**
- **Specialist examination at occupational medicine specialist**
- **Ankle-brachial index** (when you have excluded the ultrasound of leg arteries from the programme)
- **Respiratory test for the presence of HP bacteria** (when you have excluded gastroscopy from the programme)

*With preventive examinations
to a healthy and full life!*

Our doctors are our wealth

All our doctors, performing specialist examination for us, are top experts with several years of experience. Most doctors are employed in the Diagnostični center Bled, which is undoubtedly our great advantage.

OUR MEDICAL SPECIALISTS

Milan Stefanovič, MD, gastroenterology specialist, chief of medicine

He has worked in Diagnostični center Bled since 1993 and works as the chief of gastroenterological services and **a medical director of the centre**. Devoted to his profession in Diagnostični center Bled, he continues the excellent tradition of gastrointestinal endoscopy. As an exceptional specialist and unique therapist, he tackles even the most difficult endoscopic interventions. He did a lot to raise the quality of endoscopy in Slovenia; his main activity, in addition to endoscopic diagnostics and medical treatment, is prevention and early identification of colorectal cancer and medical treatment of the pancreas disease.

Miran Drenovec, MD, gastroenterology specialist

He has worked in Diagnostični center Bled since 1994. As a gastroenterologist, he is focusing on endoscopic (gastroscopy, colonoscopy, enteroscopy, ERCP), ultrasound diagnostics (normal ultrasound, endoscopic ultrasound and ultrasound-guided punctures), and on medical treatment. He is a top expert in ERCP and endo-ultrasound. His postgraduate study was abdominal ultrasound and hepatology.

Ljiljana Ljepović, MD, gastroenterology specialist

She is the **chief specialist of the preventive health evaluations** in the Diagnostični center Bled, engaged in gastroenterology with endoscopic (gastroscopy and colonoscopy) diagnostics and medical treatment since 2000. She pays particular attention to hepatology (liver disease). In addition to gastroenterology, she extremely professionally runs preventive health evaluations. She published a large number of scientific articles on the importance of preventive examinations. She also held expert lectures about the growing problem of burnout syndrome of managers.

Jasna Volfand, MD, gastroenterology specialist

She has been employed in Diagnostični center Bled, engaged in gastroenterology with endoscopic (gastroscopy) and ultrasound diagnostics, since 1993. She is specifically focused on the allergology with immunology and nutrition, and is therefore working in the allergy clinic, dealing with allergic diseases of the gastrointestinal tract, celiac disease, and other forms of adverse reactions to food.

Rajko Knežević, MD, internal medicine specialist

Rajko Knežević has practised gastroenterology since 2003 and has been part of the Diagnostični Center Bled team since 2015, performing diagnostic and therapeutic gastrointestinal endoscopies and ultrasounds. In addition to constantly working on improving his skills in those areas, he also wants to start performing interventional procedures in the near future.

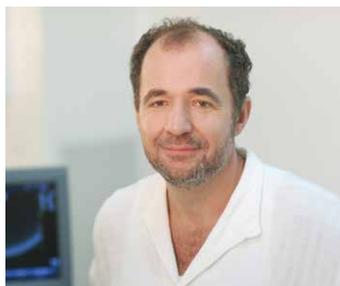

Irena Žnideršič, MD, radiology specialist

Irena Žnideršič, has many years of experience in hospital diagnostics and emergency radiological diagnostics, has worked at the Diagnostični center Bled since 2016. She performs abdominal, breast, testicle, neck soft tissue and prostate examinations using state-of-the-art ultrasound equipment. Dr Žnideršič is also highly experienced in performing ultrasound-guided procedures such as prostate biopsies and shoulder calcium deposit removals.

Lidija Kaučević Pohar, MD, internal medicine specialist

She has been employed in Diagnostični center Bled since 2006. She has focused her attention on diseases of modern times, such as arterial hypertension, obesity, diabetes, and blood lipid disorders, which lead to premature failure of the cardiovascular system. She deals with non-invasive cardiovascular diagnostics, prevention and medical treatment of cardiovascular diseases; she performs stress testing and ultrasound examination of carotid arteries. She also runs an osteoporosis clinic.

Dejan Urlep, MD, Msc, gastroenterology specialist

He has been employed in Diagnostični center Bled since 2009 and works in gastroenterology. He has experience in dealing with various clinical tests. He is a passionate and precise expert in gastroscopy, colonoscopy, abdominal ultrasound, and endoscopic retrograde cholangiopancreatography (ERCP). He sees the greatest chance for professional advancement in endoscopic ultrasound, which he is studying further.

Borut Gubina, MD, specialist in urology

Borut Gubina made a specialisation from urology in 2008. He has been employed in the diagnostic centre Diagnostični center Bled since 2017, and prior to this he worked at the Urology Clinic at the University Medical Centre Ljubljana since 2004, where he was deeply engaged with prostate, kidney and bladder diseases. He carried out all diagnostic examinations of urological organs and operational procedures, particularly in the field of urological oncology. In his work, he pays a lot of attention to the detection and treatment of prostate cancer.

OTHER SPECIALISTS

We cooperate with many specialists who complement our activity and carry out examinations, also within preventive health evaluations. Among them are cardiologists, urologists, orthopaedic specialists, radiologists, gynaecologists, thyroidologists, dermatologists and otolaryngologists.

Other useful information

1. WHAT DO YOU NEED TO BRING WITH YOU?

Bring the latest medical results with you if you have them. The examination is performed on a completely empty stomach. Wear comfortable clothing for your well-being during tests and carrying out the physical performance test. Also bring your personal care items and sports shoes. For a 2-day Comprehensive Health Evaluation in Bled, also bring pyjamas.

2. PROCEDURE AFTER THE ILLNESS HAS BEEN ESTABLISHED

The examinations are followed by a concluding interview, during which the specialist internist presents the examinee his/her health conditions on the basis of analysing all the results, and gives instructions and recommendations about further treatment. All further control examinations can be carried out in Bled as well as in Ljubljana. If an operation is needed, the patient is referred to an appropriate institution.

3. HOW DO I APPLY?

For additional information, offer and to book an appointment for the preventive examination, please contact:

- Nina Benedičič: +386 (0)4 579 82 93, nina.benedicic@dc-bleed.si
- Romana Lenarčič: +386 (0)4 579 84 08, romana.lenarcic@dc-bleed.si

You will receive all instructions to your e-mail or home address. Use an order form to book your appointment and type of examination.

4. PAYMENT

Companies

After the completion of the health evaluation, we issue an invoice to companies, which must be paid within the deadline.

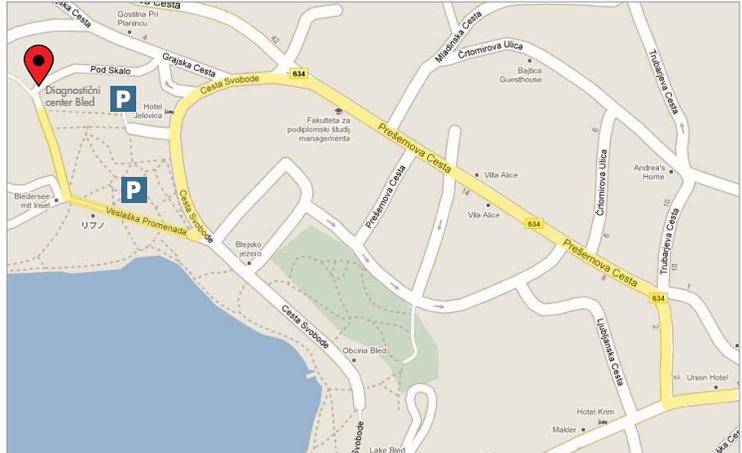

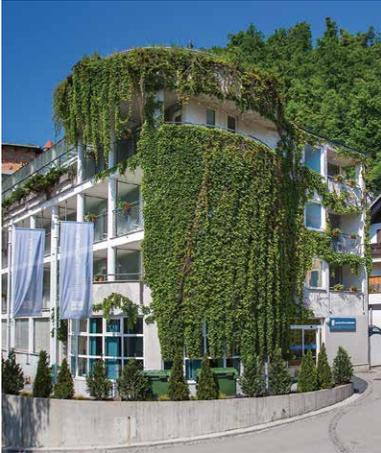

Individuals

If you are booking a health evaluation as a private patient, you pay the price of the health evaluation upon departure. You can pay in cash or with a credit card.

Location

BLED

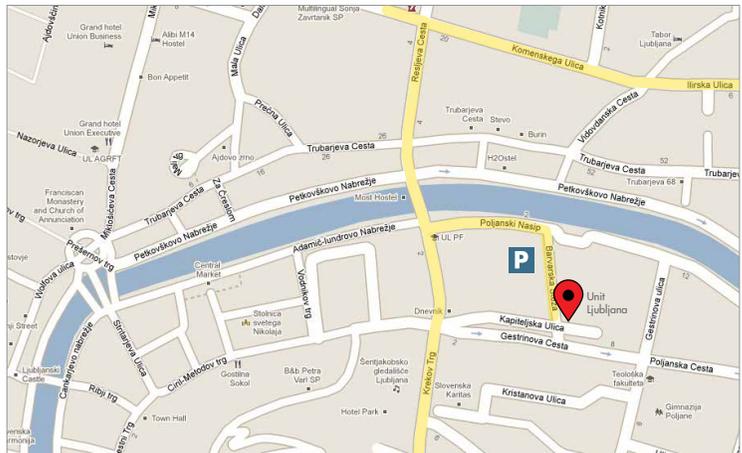

Pod Skalo 4, 4260 Bled, Slovenia

From Ljubljana, drive on the road "Ljubljanska ulica". In the first big intersection with traffic lights, before the road descends straight to the lake, turn right and take the road "Prešernova cesta" towards Pokljuka. You can park in front of our building or on publicly available parking areas in Bled (choose the one with unlimited parking time). Parking is payable.

LJUBLJANA

Barvarska steza 4, Vila Urbana, 1000 Ljubljana, Slovenia

Ljubljana unit is located near the Ljubljana Central market or the new Faculty of Law, just a few meters away from the Dragon Bridge. You can park in the Kapitelj parking garage. From the garage, you can access our centre by elevator, so parking in the garage is also suitable for the disabled. Parking is payable.

Examinees' comments about health evaluations, selected from the book of complaints and compliments

We came in fear of examinations, but it disappeared as soon as we met the friendly nurses and excellent doctors. We both agreed that, for the first time in our lives, we experienced such a personal and genuine approach of doctors. All doctors who examined us were excellent, professional, and friendly. It is a really good feeling when you can have such a direct contact with a doctor, when you are an equal partner in a conversation, and when a doctor has a great deal of respect for patients. All problems become smaller, and confidence that someone will help you with your problems becomes immense. All the nurses always had a smile on their faces, encouraged us, and were generally very friendly. Excellent atmosphere! Thank you, to each and every one of you!

Examinees, April 2004

We would like to sincerely thank you for the professionalism, friendliness, and atmosphere the Diagnostic Centre Bled provides to their patients. All is top notch and can serve as an example to every institution. I did not feel as a patient but as a member of a welcoming family. Many thanks to the medical staff who are devoted to the job they do.

Examinee, April 2017

Highly professional staff – a complete, excellent client relationship, superb coordination of appointments and the optimal set of examinations. It was only here that I realised what a well-planned preventive examination can reveal. Thank you and wishing you great success in the future.

Examinee, May 2017

Dear team of Diagnostični center Bled! No medical institution has accepted me in such a friendly manner, and fascinated me with its approach towards patients the entire time of the examination. You have tried in every way, you explained in detail the course of the examination, the causes of my health problems, and gave me professional advice on how to proceed. The entire staff was exceptionally kind to me. This is lacking elsewhere! I thank you for this experience and wish you further working success!

Examinee, July 2009

During my stay in your centre, I trusted you my greatest asset, "my health". You examined me, gave me information and an overview of my health condition, as well as instruction for its preservation, maintenance, and revitalisation. I am sincerely grateful to you for a highly professional attitude and kindness. Thank you with all my heart. With great respect!

Examinee, November 2010

Excellent work organisation. Everything is done in stages, continuously, timely, but still without undue haste and "hysteria". Some examinations are not the most pleasant, but with a friendly staff even those less pleasant tests are easier to tolerate. An in-depth professional approach has formed my opinion, "If there is a place where they can discover a disease, it is at Diagnostični center Bled!"

Examinee, September 2010

Even on vacation, they are not as nice as here. Thank you for your kindness and encouragement. Many should follow the example of this establishment. Stay as you are: loving, warm, and kind!

Examinee, July 2011

Note: The authenticity of those statements can be verified at the seat of the company – Diagnostični center Bled. For the purpose of this publication, we proofread and translated these records.
